

Student First and Last Name:	Ryan Woodward
Student ID:	V00857268

- **OPTIONAL: Print this .pdf.** If you do not have easy access to a printer, that is ok, but it is easier for us instructors to have a consistent format when marking so if you can print it out please do so. There are 3 questions and 4 pages (including this page).
- For each problem, **write out a full solution.** Solutions should be clear, complete, and justified. *Final answers without supporting work will be graded as zero.*
- **This exam is individual.** Communicating with anybody else during the test is a strict violation of Academic Integrity. Posting the test on the internet is a violation not just of academic integrity but of Canadian copyright law.
- **This exam is open book.** You may consult your notes, the book, the videos, etc, but you must still write full solutions. We consider "googling" the problems to be unethical, and have written the problems aiming to minimize the usefulness of this.
- **If you need help during the exam,** I will be available live at [ibrahims@uvic.ca](mailto:ibrahims@uvic.ca)
- The normal time for test is **30 minutes for writing and 15 minutes for scanning, and uploading.** If you have a time multiplier through CAL then the upload link will be available for that longer time period. Please do not leave this to the last few minutes to scan in case of a technological issue. Use your phone or other scanning device. Apps such as Adobe Scan can make a clean pdf file. Make sure all your pages are oriented correctly and in the right order. It's ok to insert your own pages if needed.
- **If something goes wrong** with scanning and uploading let me know ASAP. Take a clean photo of each page and email them to [ibrahims@uvic.ca](mailto:ibrahims@uvic.ca) by the end of the exam.
- Please keep your exam for at least two weeks in case we need you to rescan.
- Please read and sign the Confidentiality Agreement <sup>1</sup> before solving the quiz

<sup>1</sup>Confidentiality Agreement: I did not communicate with any other person or show this exam in any way. I followed all exam instructions.

1. [5 pts] Integrate the function  $f(x, y) = x^2 - y$  over the curve  $C : x^2 + y^2 = 4$  in the first quadrant from  $(0, 2)$  to  $(\sqrt{2}, \sqrt{2})$ .

$$\vec{r}(t) = \langle 2 \cos t, 2 \sin t \rangle \quad 0 \leq t \leq \pi/4$$

$$\frac{d\vec{r}}{dt} = \langle -2 \sin t, 2 \cos t \rangle$$

$$|\vec{v}(t)| = \sqrt{(-2 \sin t)^2 + (2 \cos t)^2} = \sqrt{4 \sin^2 t + 4 \cos^2 t} \\ = \sqrt{4(\sin^2 t + \cos^2 t)} = \sqrt{4} = 2$$

$$\int_0^{\pi/4} f(\vec{r}(t)) |\vec{v}(t)| dt = 2 \int_0^{\pi/4} (2 \cos^2 t - 2 \sin t) dt$$

$$= 2 \int_0^{\pi/4} 4 \cos^2 t - 2 \sin t dt$$

$$= 2 \int_0^{\pi/4} 4 \left( \frac{1 + \cos(2t)}{2} \right) - 2 \sin t dt$$

$$= 2 \int_0^{\pi/4} 2 + 2 \cos(2t) - 2 \sin t dt$$

$$= 4 \int_0^{\pi/4} 1 + \cos(2t) - \sin t dt$$

$$= 4 \left[ t + \frac{\sin(2t)}{2} + \cos t \right]_0^{\pi/4}$$

$$= 4 \left[ \left( \frac{\pi}{4} + 1 + \frac{\sqrt{2}}{2} \right) - (0 + 0 + 2) \right]$$

$$= 4 \left[ \left( \frac{\pi}{4} + \frac{\sqrt{2}}{2} - 1 \right) \right] = \pi + \frac{8}{\sqrt{2}} - 4$$

2. [5 pts] Find the work done by the force  $\vec{F} = xy\vec{i} + (y-x)\vec{j}$  over the straight line from  $(2, -1)$  to  $(3, -2)$ . Is the work independent of the path between the two endpoints? Clearly explain why.

$$W = \int_C \vec{F} \cdot d\vec{r}$$

$$\vec{r}(t) = (1-t)\langle 2, -1 \rangle + t\langle 3, -2 \rangle$$

$$= \langle 2-2t+3t, -1+t-2t \rangle$$

$$= \int_0^1 \vec{F}(\vec{r}(t)) \cdot \frac{d\vec{r}}{dt} dt$$

$$= \langle 2+t, -1-t \rangle$$

$$= \int_0^1 \langle (2+t)(-1-t), (-1-t)-(2+t) \rangle \cdot \frac{d\vec{r}}{dt} dt$$

$$\frac{d\vec{r}}{dt} = \langle 1, -1 \rangle$$

$$= \int_0^1 \langle -2-2t-t-t^2, -3-2t \rangle \cdot \langle 1, -1 \rangle dt$$

$$= \int_0^1 \langle -2-3t-t^2, -3-2t \rangle \cdot \langle 1, -1 \rangle dt$$

$$= \int_0^1 -2-3t-t^2 + 3+2t dt = \int_0^1 1-t-t^2 dt$$

$$= \left[ t - \frac{t^2}{2} - \frac{t^3}{3} \right]_0^1 = \left[ 1 - \frac{1}{2} - \frac{1}{3} \right] = \frac{1}{6}$$

$\therefore$  Work done is  $\frac{1}{6}$

$$\frac{\partial M}{\partial x} = -1, \quad \frac{\partial M}{\partial y} = y$$

$\hookrightarrow$  The work done is dependent on the path because the field is not conservative because

$$\frac{\partial M}{\partial y} \neq \frac{\partial N}{\partial x}$$

Complete under assumption  $5z \hat{j}$  was really  $5x \hat{j}$  otherwise field isn't conservative.

3. [5 pts] Find a potential function  $f$  for the field  $\vec{F} = e^{y+4z}(5\vec{i} + 5z\vec{j} + 20x\vec{k})$ .

Conservative?

$$\frac{\partial P}{\partial y} = 20x e^{y+4z}, \frac{\partial N}{\partial z} = 5 \cdot 4 e^{y+4z} = 20 e^{y+4z}, \frac{\partial P}{\partial x} = 20 e^{y+4z}, \frac{\partial M}{\partial z} = 20 e^{y+4z}$$

$$\frac{\partial N}{\partial x} = 0, \frac{\partial M}{\partial y} = 0$$

$$\frac{\partial f}{\partial x} = 5 e^{y+4z} \Rightarrow f(x, y, z) = \int 5 e^{y+4z} dx = 5x e^{y+4z} + g(y, z)$$

$$\frac{\partial f}{\partial y} = 5x e^{y+4z} + g'(y, z) \Rightarrow 5x e^{y+4z} = 5x e^{y+4z} + g'(y, z)$$

$$0 = g'(y, z) \Rightarrow \int 0 dy = 0 + h(z)$$

$$f(x, y, z) = 5x e^{y+4z} + h(z)$$

$$\frac{\partial f}{\partial z} = 20x e^{y+4z} + h'(z) \Rightarrow 20x e^{y+4z} = 20x e^{y+4z} + h'(z)$$

$$0 = h'(z) \Rightarrow \int 0 dz = 0 + C$$

∴ Potential function is

$$\boxed{f(x, y, z) = 5x \cdot e^{y+4z} + C}$$
